

## meetle – The First Geosocial Mobile Platform with Guaranteed Privacy Protection – Now Available in App Store

LEIPZIG, JULY 2017

meetle is a smartphone app that offers a geosocial networking service, which provides a new and easy way for people to meet each other, explore their environment and organize their social life – complete with a messaging service and the opportunity to create events. meetle quickly and easily displays contacts that happen to be close by. Users are represented by avatars and are visible on the meetle map. All users can design their avatar individually and adapt it to their current needs and activities. The meetle map displays the distance between users in a unique way, yet without showing their exact location. *“Data integrity was our main motive for creating meetle.”* says Axel Augstein, co-founder of meetle. *“We guarantee our users data security and personal privacy. We created an app that is secure, fair but most of all a lot of fun!”* Intuitively meetle enables people to meet spontaneously and provides a convenient way of keeping in touch – no need for time-consuming phone calls or long text messages.

After four years of development and planning, the meetle team is excited about the launch! *“We did it!”* Co-Founder Karl-Ludwig Wachler says *“We worked so hard, against the odds and all naysayers. We launched the first geosocial mobile app that allows you to be social online but guarantees your privacy! It just feels so good!”*

meetle is now available for free in App Store! An Android version follows in September.
